

FirstNet for healthcare: Priority access for critical communications

FirstNet® is the only nationwide communications platform built with and for public safety.

10

ways FirstNet can be the difference when seconds matter:

1

Virtual care solutions

FirstNet prioritizes telemedicine and remote patient monitoring, which improves your customer experience and can help spot health problems before they become too serious.

2

Health records and apps

FirstNet subscribers have priority access to the wireless network, which means ultra-fast access to a patient's Electronic Medical Records stored in the cloud.

3

Emergency fleet

Add a FirstNet wireless modem to your hospital and ambulatory fleet to avoid competing with commercial data traffic when you need to share critical information with trauma centers, helping to improve patient care.

4

Clinicians

Having priority to the wireless network means that even when patients are watching their phones while they wait, you can reach the department or person you need.

5

Rapid deployment kits

FirstNet offers rapid deployment kits that include pre-charged smartphones that are connected to the FirstNet network so even if the power goes out, your hospital or mobile emergency unit will still be connected.

6

Communications

FirstNet Push-to-Talk allows interoperability between LMR devices in addition to group calling all with priority access on the network.

7

Red Phones

FirstNet devices can replace or back up Red Phones.

8

Internet of Medical Things (IoMT)

Within the Internet of Medical Things, a variety of objects can be turned into smart devices to enhance patient care. For example, those objects can include heart monitors, medications, and wheelchairs. FirstNet helps ensure that the connection between those devices and the cellular network are prioritized.

9

Private Branch Exchange

Private Branch Exchange is a private organization network used within an organization. FirstNet can extend that network access to smartphones.

10

Emergency backups

Hospitals, clinics, and emergency rooms can't afford even brief system outages. Wireless backup on FirstNet means doctors always have access to key communications, applications, and systems.
